

How did we read in the data?

- Buffered Reader
- Line by line
- Each line stored in a String variable
- Split the line by commas in to an array
- Various arrays declared outside setup, functions were called to alter their contents.
- These arrays are used to call queries

Pros:

- It's simple, no need to alter files.
- It works!!

Cons:

- Very slow!

What did we do with our queries?

- **Bar chart's**
 - Class which took in arrays of data
 - Different Widgets, different bar charts
- **Pie chart's**
 - Class which took in arrays of dat
 - Different Widgets, different bar charts
- **Map**
 - Date dependent
 - Pins for pick-up & drop-off
 - Lines between pick-up & drop-off points
 - Heat map: grids
